Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

I developed my PhD studies in the University of Barcelona (UB) in 2006, thanks to a fellowship from the City Council of Barcelona. I have specialized in Botany, especially in the history of Botany and in the study of historical herbaria. Work in the BC Herbarium from 2009 as a curator for the herbarium, and in the research line of "History of Botany and analysis of collections". I have also worked on the conservation of the Salvador Cabinet, carrying out a project of revision, restoration and conservation of the specimens of the collection, and as curator of the "Salvadoriana" exhibition.

My main interests are in the area of demonstrating changes in flora over time, extinctions, regressions or introduction of alien species, through historical herbaria. I also participate in taxonomic studies through the search of type sheets, and themes of taxonomic and / or nomenclatural interest in historical herbaria. I am also interested in the study of the historical documentation of the historical herbaria, along with the botanists who collaborated, as well as the cultural and / or political circumstances of the moment that led to its creation. My aim is to make known the value of the historical herbaria of the Botanical Institute as definitive witnesses for the comparison and classification of the taxa, to verify examples of possible extinctions due to climate change, and to date the introduction of alien plants in our country. I have a total of 33 articles, 3 of which are Q1 and 4 of Q2. I have also attended and presented 18 papers in seminars and conferences. The projects in which I have participated are two, from the European Union, to study the impact of the climatic change on the flora of the Pyrenees, and in a project of digitization of the type sheets conserved in the BC herbarium from the United States. Nowadays I have working in a project of National Government about the origin, morphological variability, genetic and chemistry of Cannabis. I have carried out duties for four undergraduate students of the Bachelor's degree courses in Biology (UB, UAB).

General quality indicators of scientific research

This section describes briefly the main quality indicators of scientific production (periods of research activity, experience in supervising doctoral theses, total citations, articles in journals of the first quartile, H index...). It also includes other important aspects or peculiarities.
